### Lotus Sanitizing System By Tersano

Eco-conscious consumers are increasingly concerned about their impact on the world outside. But what about all the toxins and microbes that make their way from the world into our homes? The Lotus system provides a means by which to sanitize food and household items using everyday tap water.

Edibles such as fruits and meats, or items such as sponges and baby bottles, are placed into a container that's filled with water and seated on the base unit. Lotus generates molecules of ozone, a natural sanitizer made up of three oxygen atoms, and then infuses the ozone into the water, lending the power to kill 99.9% of bacteria and destroy pesticide residue. Sanitize the contents of the container or carry a spray bottle of ozonated water around the house to kill microbial ick wherever it may creep and crawl.
